

TACTICAL LONGEVITY

Brazilian Jiu-Jitsu for Law Enforcement — Evidence Brief & Pilot Proposal

Marietta Police Department reported BJJ training outcomes (2020 comparison):

48%	53%	23%
Reduction in Officer Injuries during use-of-force incidents	Reduction in Injuries to Suspects when force was required	Reduction in Taser Use by participating officers

Operational Limitations & Safety Disclaimer

Important Program Scope: These figures represent department-reported operational outcomes from one specific agency (Marietta Police Department, published February 8, 2021). They do not constitute a randomized controlled study and do not guarantee equivalent results for other departments.

Policy & Regulation: Sensei Sandy BJJ provides supplemental defensive-tactics conditioning. It does not replace agency-approved training, state-mandated guidelines, or local use-of-force policies. All on-duty application is subject to department regulations and legal requirements.

Proposed 12-Week Agency Pilot Structure

Phase 1: Movement & Recovery	Establishes base, posture, standing recovery, framing, escapes, and structural alignment. Focuses on minimizing effort and preventing injuries.
Phase 2: Control & Teamwork	Covers clinch positioning, clean stabilization, controlled takedowns, clear communication, and safe, partner-supported transition drills.
Phase 3: Integration & Review	Introduces progressive resistance, situational decision-making under stress, skill reviews, and supervisor debrief protocols.

Tactical & Professional Context

In *Brazilian Jiu-Jitsu: The Future of Policing*, Chief Dan Flynn argues that leverage- and control-based martial arts training can significantly complement de-escalation initiatives. Continuous physical training gives officers the poise and composure necessary to slow down encounters, communicate, and reduce reliance on blunt force.
